### BIMERR

[www.bimerr.eu](http://www.bimerr.eu)

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no. 820621

Call identifier: LC-EEB-02-2018

## NEWS FROM THE PILOT SITES:

### Pilot Participant Training

In order to efficiently validate the BIMERR tools in real renovation projects, various stakeholder engagement & BIMERR Tool training activities have been undertaken in the BIMERR Pilot Sites. Scope has been to make sure that stakeholders such as renovation designers, main contractor, building administrator, residents, pilot partners, and technical partners involved in the BIMERR tool demonstrations at the actual renovation sites are engaged, committed, informed and able to use the tools to their full potential. The main challenge was to encourage them to use the BIMERR tools during their daily activities despite being under the pressure of delivering the real renovation process.

Another important goal of these sessions was to gather further feedback that can help the tools' developers to enhance their tools thus following a user-centric approach for tools development. After each session user impressions were shared with tools owners. Follow up meetings were organized to discuss feedback provided by end users in their first contact with tools, to improve user experience for next presentation.
